

The aim of this activity is for you to think about appropriateness of different kinds of conceptual models that have been designed for similar physical and digital information artifacts. Compare the following:

a. a paperback book and an eBook

A paperback is a physical book that is printed on a paper and compose of text and images. It is a thick paper that has pages that are bound together and has either a hard cover. Or softcover while an eBook is a book created digitally and can be read on an e-reader device or app. It is sometimes called as an electronic version of a printed e-book. It is more convenient for a reader because it is one tap away from your phone, laptop, tablets and other technologies unlike a paper back.

b. a paper-based map and a smartphone map

A smartphone map is a very dynamic app that is used to navigate location in a very smooth way. It is compose of geospatial data from a mobile vehicle, typically fitted with a range of GNSS, photograph radar, laser, DAR or any while paper base map are accessible offline and anywhere but it is not updated and gives limited set of data base on the sale of map.
